

Analytics

Empower compliance teams with real-time insights to reduce risk and make smarter, data-driven business decisions.

In today's fast-moving regulatory environment, compliance teams need more than static reports—they need timely insights to mitigate firm risk and confidently guide business decisions. Analytics—part of StarCompliance Enterprise—delivers the flexibility, customization, and self-service tools firms need to turn data into action. With the ability to build and personalize dashboards, users gain the freedom to explore information in ways that surface meaningful insights and drive measurable business impact.

Why choose Analytics?

-  **Real-time visibility into risk**
Stay ahead of potential compliance issues with insights that refresh as your business evolves.
-  **Self-service flexibility**
Create, edit, and customize dashboards and reports without relying on IT or third parties.
-  **Scalable and collaborative**
Share dashboards across teams, assign user roles, and adapt reporting structures to fit firm needs.

Core Features That Drive Results:

➤ Custom Dashboards, Unlimited Possibilities

Users can build unlimited dashboards with drag-and-drop functionality, apply dashboard-level filters, and create multiple data tabs for easy organization. Reports are fully customizable, offering complete control over how data is visualized with 25 chart types to choose from. Compliance teams and business leaders alike can explore data their way—unlocking deeper insights tailored to their role. Analytics also offers 15+ pre-built dashboards, displaying the most popular reports STAR users leverage most.

➤ Group-Based Sharing & Role Management

Easily create groups for sharing dashboards across teams, with role-based access to control who can view, edit, or assign dashboards. Supervisor reporting extends this flexibility by allowing managers to view data as another user based on reporting structure. This ensures sensitive data is protected while promoting collaboration across compliance and supervisory functions.

➤ Interactive, Drill-Down Reporting

Move beyond surface-level reporting with interactive functionality. Users can drill into underlying datapoints, change how data is totaled (e.g. sum, average, etc.), and write formulas to categorize and display information. Analytics also makes it easy to analyze performance across comparable time periods, helping firms uncover meaningful trends and patterns. With multicurrency support, global firms can compare and analyze financial results across geographies with confidence. Reports can be favorited, pinned to a live dashboard, or downloaded to PDF or Excel.

Empowering Teams With Data-Driven Oversight

With Analytics, compliance and business teams gain control, speed, and insight. Real-time visibility reduces firm risk, while self-service dashboards empower users to build, customize, and share the reports that matter most. By putting the power of data in the hands of those who need it, Analytics transforms oversight from a static process into a dynamic driver of business value.
